AI4Human

One friendly place for food, fitness, sleep and mood guidance, from a team of AI specialists that puts safety first.

Pitch deck | Wellness guidance only, not medical advice. Adults 18+.

The problem

Staying healthy is confusing, scattered and often generic.

Too many apps

Food in one app, workouts in another, sleep in a third. Nothing talks to anything else.

Generic advice

Online tips ignore your age, goals, diet and injuries, so people give up or follow bad advice.

Risky shortcuts

Chatbots can give unsafe numbers or miss that someone is struggling and needs real help.

People want one trusted companion that knows them, gives clear next steps, and knows when to say "please talk to a professional".

The solution

A wellness team in one chat window.

Nutrition

Meal ideas and daily calorie and protein targets.

Fitness

Workouts that fit your level and any injuries.

Sleep & recovery

Simple habits for better rest.

Mental wellbeing

Gentle support and coping ideas.

Check-ins

Log how you feel and see your progress over time.

You ask one question. A coordinator brings in the right specialists and gives you one clear answer.

How it works

Four simple steps, every time.

1. You ask

Type a question, like "help me plan a week of meals".

2. Safety check

Anything urgent gets a caring, vetted response right away.

3. Specialists help

The right experts work on your question together.

4. One answer

A clear plan, double-checked before you see it.

Your numbers (like calorie targets) come from a trusted calculator, never guessed by the AI.

What makes it different

Our key strengths.

Safety built in

Safety rules run in plain code, not just instructions to the AI. Crisis and medical topics get vetted help.

Accurate numbers

Calorie and nutrition targets come from a calculator with a safe minimum, so the AI can't make them up.

Private by design

Your data stays on your own device. Your API key is never stored. Health details are kept out of logs.

Team of specialists

Each expert has a narrow job and only the tools it needs, which keeps answers focused.

Feels instant

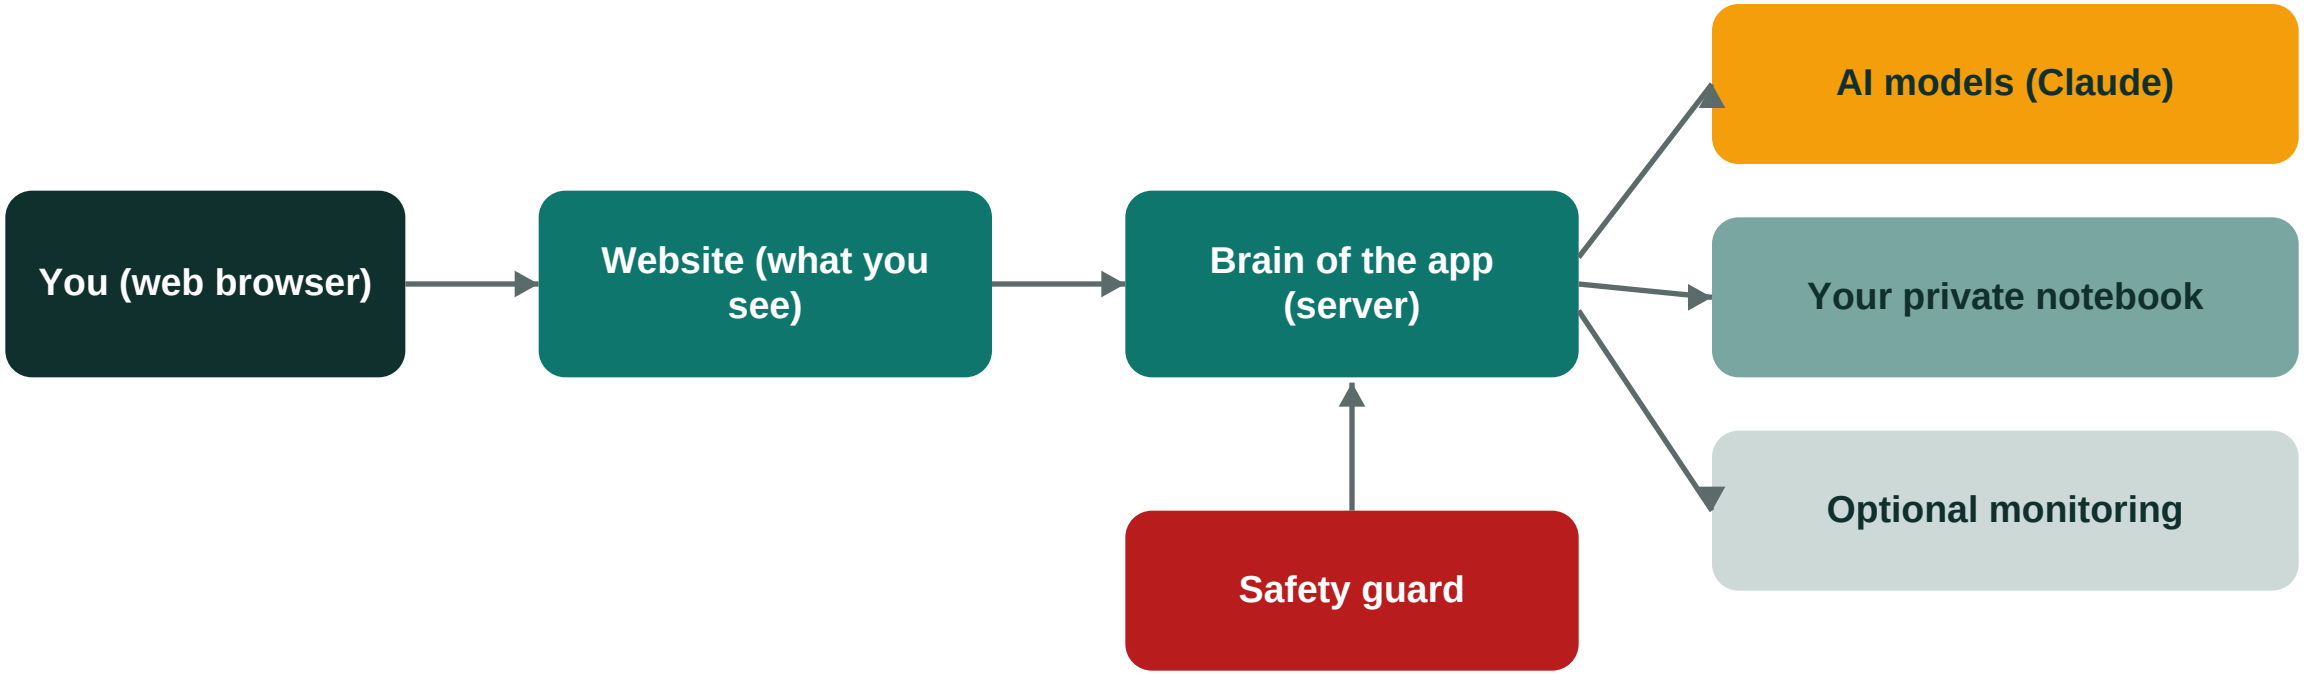
Answers appear as they are written, and you can see which specialist is working.

Tested and honest

Automated tests check safety on every change. We clearly label what is not yet verified.

Architecture at a glance

The big picture, without the jargon.



The safety guard checks every message first and every answer last. Your notebook (profile and check-ins) lives on your own machine.

What it's built from

Proven, mainstream building blocks.

Website	**Next.js and React**	Fast, modern screens for chat, profile and progress.
Server	**Python and FastAPI**	Receives questions and coordinates the team.
AI engine	**Claude Agent SDK**	Runs the coordinator and the specialist agents.
Memory	**SQLite**	A small local database for profile and check-ins.
Safety	**Rules in code**	Checks messages in and answers out.
Quality	**Automated tests, Langfuse**	Tests on every change; optional privacy-masked monitoring.

How it can grow

Today a personal companion; tomorrow a platform.

Now

Single user, runs on your own machine, bring your own AI key.

Next

Accounts, a shared database, and hosting for many users at once.

Later

Wearable and device data, weekly reviews, more languages.

Beyond

Partner with coaches and clinics, with safety checks at every step.

Growth is easy because each part is separate: add more servers, add new specialists, or swap the AI model without rebuilding the app.

Planned next: a second AI safety reviewer for tricky messages, and structured daily plans.

Where we are

Honest about what is proven and what is next.

Verified so far

Automated tests for safety, calculators and the web app all pass. A full demo works end to end without any AI key.

Still to verify

Behavior with the real AI model, live monitoring, and packaged installs. We will test these before any public launch.

Try it: run the demo in a few minutes using the steps in the README.

Wellness guidance only, not medical advice. If you are in crisis, contact local emergency services or a crisis line.
